

Solaglaze Glass Rooflights

Rooflights are a great way to completely transform the look and feel of an area by bringing the outside in. A naturally lit room not only reduces electrical costs, but research also shows that it can greatly increase productivity levels and provide a sense of well-being and relaxation.

Naturalight's Solaglaze range is available in UPVC and aluminium and is designed to be aesthetically pleasing whilst offering an effective way of letting in natural light.

Our aluminium Solaglaze is powder coated to the customer's desired colour from a standard range and the UPVC Solaglaze is available in a self-finish of either White or Anthracite grey.

This system is generally installed to a builder's upstand and once in place, it's easily installed using the supplied colour co-ordinated angle brackets, which can be hidden behind the plasterboard.

Available in either Double or Triple glazed toughened clear glass with optional sand blated or black border. The Solaglaze system can be combined with a UPVC or aluminium kerb to incorporate the following options: Hit and miss ventilation, Rotary vent, Pole operated wormgear, Access Hatch, 230v Chain Motor. Delivery approx. 7 days.
